Zhen Gu received his B.S. degree in Chemistry and M.S. degrees in Polymer Chemistry and Physics from Nanjing University. In 2010, he obtained Ph.D. degree at the University of California, Los Angeles, under the guidance of Prof. Yi Tang in the Department of Chemical and Biomolecular Engineering. He was a postdoctoral associate working with Prof. Robert Langer at Massachusetts Institute of Technology and Harvard Medical School during 2010 to 2012. He is currently an Assistant Professor in the Joint Department of Biomedical Engineering at the University of North Carolina at Chapel Hill and North Carolina State University. He also holds a joint position in the UNC Eshelman School of Pharmacy. His group studies controlled drug delivery, bio-inspired materials and nanobiotechnology.

Abstract

Title: Small But Smart Drug Delivery (小而巧的递药体系)

Spurred by recent advances in molecular pharmaceuticals and materials chemistry, stimuli-responsive “smart” systems offer opportunities for delivering drugs in dose-, spatial- and temporal-controlled fashions. In this talk, I will discuss our ongoing efforts in using physiological signals, such as blood sugar level, enzyme activity and ATP gradient for on-demand drug release. I will first present the glucose-responsive closed-loop systems for biomimetic delivery of insulin. Next, I will discuss enzyme-activated formulations for delivery of cytokine, apoptotic executor and transcription factors in a programmed manner. Finally, I will introduce our recent work on ATP-mediated anticancer drug delivery.
